

How to look after your mayflies

1. Look at each vessel and check that the air is bubbling in every bottle every day

2. Check the water level each day and keep it topped up to the marker every day

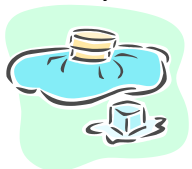

3. Check the water temperature against your “water temperature check” chart every day

4. Add frozen cool packs to the base tray whenever the temperature is too high!

5. Put any thawed cool packs back in the freezer

6. Check to see if any mayflies have hatched every day if they have – transfer them gently using a paint brush to the special box which will be kept in the fridge until release day

7. Add the correct food once per week (your teacher will supply the right food for your mayflies)
